

Dear Hiring Manager,

I am excited to apply for opportunities in Machine Learning, AI Engineering, and Computer Vision at your organization.

I am a self taught Machine Learning Engineer with strong hands on experience building practical AI systems using Deep Learning, Computer Vision, Semantic Search, and Generative AI. What makes my journey unique is that I entered the field without a traditional technical background and built my skills independently through consistent learning and real world project development.

One of my major projects, SmartCart AI, is a production ready multimodal semantic search system that uses CLIP embeddings and FAISS to perform scalable text and image based product retrieval across nearly 60K products. I also designed backend APIs using FastAPI and worked with Docker based deployment pipelines. Alongside this, I have developed real time computer vision systems, implemented GANs from scratch, and explored diffusion model architectures.

I enjoy building systems that are not only technically strong but also practical and scalable for real world use. My experience with tools such as PyTorch, TensorFlow, Hugging Face, OpenCV, FastAPI, Docker, AWS, and PostgreSQL has helped me understand both the machine learning and deployment sides of AI applications.

In addition, being a Kaggle Expert with multiple medals reflects my problem solving mindset, consistency, and ability to work with real datasets and competitive environments.

I am eager to contribute my skills, continue learning from experienced professionals, and grow as an AI Engineer in a challenging environment. Thank you for considering my application. I would welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Aromal Dileep
